

SPECIAL OPERATIONS

- Supplement traditional manned guarding with flexible, independent special operations
- Face business challenges and corruption head-on

Our proactivity in this arena has yielded many successes

PROVIDING FLEXIBILITY AND INDEPENDENT SUPPORT

"Our Special Operations teams provide flexible, independent support in a world where workforce ethics have drastically declined, criminal activities have increased and corruption is rife in all spheres of the South African society".

The Thorburn Special Ops team provide flexibility, support and independence to the Thorburn guarding operations and continue to prove their success, more especially in, but not limited to, the mining sector.

By adding intelligence gathering and investigative capabilities to our teams, we have seen growth both in stature and success rate over the past 5 years.

Teams are equipped with a state-of-the-art night vision devices, thermal cameras and specialized equipment such as CO2 rifles & pistols. Team members are trained in first-aid, firefighting and crowd facilitation, whilst vehicles are fitted with console cameras.

The role of the Thorburn Special Ops Team is:

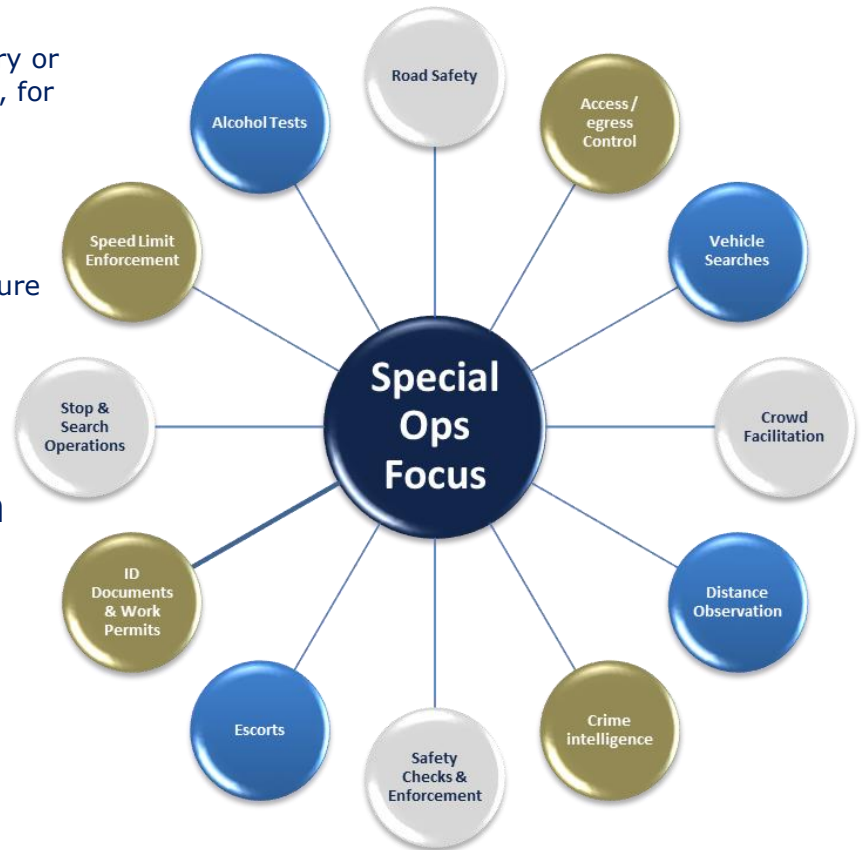

- crime prevention initiatives
- road safety and general safety enforcement
- adding "visible policing"
- providing flexibility – deployment in assistance to traditional guarding or for independent takeover of certain guarding functions for a period

Focus Areas

Focus areas are defined by the nature of the industry or sector, in tandem with the operational environment, for instance the operational focus of special ops in a residential estate will differ from that of a mine or industrial site.

Site-specific requirements and frequencies of the operations are discussed with our customers to ensure expectations are met

We bridge the gap between QUALITY and EFFICIENCY with our unique concept.

Special Ops are performed:

- Independently or in conjunction with conventional security guarding operations. The primary goal is to achieve a crime prevention or safety (including road safety) objective where a traditional security guarding force requirement does not exist, falls short in manpower numbers, or may affect the overall operational outcome
- In a low-profile manner that achieves the advantage of surprise and speed of action on an unsuspecting target
- With limited numbers of highly trained personnel that can operate in all environments, utilize self-reliance, are able to easily adapt and overcome obstacles, use unconventional security and safety skills and equipment to complete objectives
