

Bridging the gap between quality and efficiency with a divergent concept

Special Tactical Response Operations provide flexibility to Thorburn operations

ESSENTIAL SAFEGUARD TO SUPPLEMENT MANNED GUARDING

The operational environment for law enforcement, private security and the consumers of security services has drastically changed.

Crime has increased and demands for safe work practices, human rights and general wellness has increased in tandem.

Against the backdrop of negative trends, there has been a decline in workforce ethics, loyalty, integrity and quality of security forces/ law enforcement.

We bridge the gap in security between quality and efficiency with our Special Operations concept.

- **Carried out by highly trained personnel (medical training for first responders)**
- **Conducted in a low-profile manner with the advantage of speed and surprise against an unsuspecting target**
- **Vehicles fitted with CCTV cameras and monitored during critical deployment**
- **Personnel equipped with bodycams, remotely monitored**

Intelligence is an essential cornerstone of special operations

What We Do:

- crime prevention initiatives
- road safety and general safety enforcement
- adding "visible policing"
- providing flexibility – assistance to guarding, or independent takeover of certain guarding functions for a period
- routing out of illegal workers brought onto site by contractors
- ensuring building sites (within a site) are free of labourers afterhours
- spot-checks within the supply-chain cycle
- acting as an intervention force in difficult situations or just general support
- covert surveillance operations
