

Environmental Policy Statement

At Thorburn Security Solutions (Pty) Ltd we take our responsibility towards sustainability very seriously and we realize that our operations have an impact on the environment.

Our environmental resource management aims to ensure that our environment is protected and maintained for future human generations, through considering ethical, economic, and scientific (ecological) variables. We understand the challenging conditions our customers face in striking the right balance between operational requirements versus the environment. Through awareness and education, we endeavor to identify factors affected by conflicts that rise between meeting our customers' needs and protecting resources.

To us sustainability implies that rather than competing for endless growth on our planet, development improves quality of life without necessarily consuming more resources. Sustainably managing environmental resources requires organizational change that instills sustainability values that portrays these values outwardly from all levels and reinforces them to surrounding stakeholders, resulting in a symbiotic relationship between Thorburn Security Solutions, the community, and the environment.

Our employees are educated to consider the following issues which can be reported to the appropriate authority by:

- Focusing on unnecessary waste witnessed at any site or area
- Combatting available, unnecessary littering within our area of responsibility
- Conserving the use of water and electricity and any other resource which directly or indirectly influences the environment
- Increasing environmental awareness among all Thorburn Security Solutions personnel
- Ensuring that all contractors follow the same example in the protection of the Environment

The Management Team is committed to:

- the protection of the environment, including prevention of pollution
- provides environmental objectives:
 - to reduce energy and resource consumption
 - to minimize the amount of waste generated
 - to reduce emissions to air
 - to prevent pollution
 - to re-use and recycle where possible
- complying with all relevant legislation pertaining to environmental and associated issues
- continual improvement of the environmental management system to enhance environmental performance.
