THORBURN
SECURITY SOLUTIONS

MINING SOLUTIONS

Responsive, adaptable security solutions for mines.

Mines are remote, high-risk environments that work according to strict health and safety protocols and require a security service provider with an in-depth understanding of the unique conditions and operational requirements. Thorburn is a Level 1 B-BBEE organisation that prides itself on providing risk-adjusted solutions to the mining sector. Our experience across diverse mining operations means we continually align our operations to address changing risks to production, safety and staff.

THE CHALLENGE

Perimeter intrusion, illegal mining and theft are some of the greatest security issues for mines as is the need to secure equipment and ensure the safety of employees. Mines are large, remote areas with poor road conditions, typically making up the patrol areas, and limited network and power infrastructure along perimeters.

Dust, humidity, fog, low light, extreme temperature and weather conditions necessitate specialised security systems that can withstand harsh environments, while cost saving with an integrated technology and manpower solution are key. Additional challenges include:

- Malicious damage and theft
- Illegal land occupation and invasion
- Protest action
- Illegal mining
- Intimidation of employees and contractors
- Large-scale organised crime

OUR SOLUTION

After conducting a thorough risk assessment, Thorburn Security Solutions provides tailored key performance areas (KPAs) and key performance indicators (KPIs) to guide the efforts of its security officers, armed response and strike-action teams on the ground.

Our highly trained and qualified personnel deliver a variety of specialised solutions and provide necessary interventions to mitigate risks based on real-time intelligence. A hands-on approach from senior management ensures that our security officers are empowered to adapt quickly and decisively to potential situations.

Risk mitigation is integral to our solutions and we make use of a world-class Cyber Intelligence Information Management System (CiiMS) platform to provide predictive analysis on crime trends as well as to identify high-risk areas and assets for pro-active security and guarding.

As an experienced single provider with multiple specialised solutions, we can offer peace-of-mind protection, security and maintenance of your property and assets.

Our solutions include:

- Guarding 24/7/365
- Armed response and tactical teams
- Access control
- CCTV, intrusion, maintenance and installation
- Electric fence line installation
- Dedicated electronic technical teams
- Strike action team
- Crowd control
- Air support surveillance (drone and helicopter)
- Intelligence and investigation
- Onsite central monitoring centre
- Offsite National Command and Control Centre
- Speed monitoring systems
- COVID-19 management
- Cyber managements system

Our **GOLD CLASS SASA** membership demonstrates our full compliance with all criteria relating to our industry.

ISO 9001 Quality Management
ISO 14001 Environmental Management
ISO 45001 Occupational Health & Safety

THE BENEFITS

- Agile response to the risk profile of sites as they change
- Integrated security risk management solutions
- Security and maintenance of assets, people and property
- Implementation of a world-class CiiMS platform for proactive monitoring and predicative analysis
- Overall cost savings
- The involvement of senior management
- Highly trained and qualified personnel
- Multiple specialised solutions from a single service provider
- Risk mitigation based on real-time intelligence
